github.com/AyushAhuja2707 | Portfolio: ayushahuja2707.github.io/Resume Ayush | Live product: bhartcollection.online

PROFESSIONAL SUMMARY

Java backend developer with **3 years at Oracle Financial Services Software** and an **Oracle FLEXCUBE Retail expert**, building the REST API layer for **HDFC Bank's transformation of branch screens into APIs**. Delivered **12 core banking APIs** in Java 17 and Spring Boot on FLEXCUBE and Oracle Banking Platform, cut OTP delivery from **4–5 minutes to under a minute**, and built **AI prompt frameworks** that generate API code, test cases and API error lists. Hands-on with **LLMs, RAG, vector databases and AI agents**; architecting a Lakehouse migration of 800 reports. **Oracle Certified Professional, Java SE 17**.

KEY ACHIEVEMENTS

- **12 banking APIs live at HDFC Bank:** Account Opening, NEFT transactions, Customer Name Change, CBR Code Maintenance, multi-level Sweep-In, CASA-to-TD transfer, TD Account Opening, Fixed Deposits and SafeBox Hold Removal, as part of HDFC's branch-screens-to-API programme.
- **OTP delivery 70% faster:** 4–5 minutes down to under one minute on HDFC NetBanking through a dual-queue mechanism and token caching that held under peak transaction volume.
- **AI-accelerated delivery:** a strict-reference prompt framework now generates most of the team's API code and test cases; a second prompt turns any API into its full error list, run across many APIs so the bank resolves issues faster.
- **Lakehouse architecture:** designing the framework to migrate 800 reports onto a Lakehouse with Airflow DAGs, Databricks, ADLS and Trino SQL.
- **Shipped my own product:** bhartcollection.online, a live e-commerce and POS platform for a retail showroom, built solo on Spring Boot 3, React and PostgreSQL.

TECHNICAL SKILLS

Core Banking: Oracle FLEXCUBE Retail (expert), FLEXCUBE Universal Banking, Oracle Banking Platform (OBP), CASA, Term & Fixed Deposits, NEFT, Sweep-In, Fund Transfers, CBR Regulatory Reporting, RBI Compliance

Backend: Java 17 / 8, Spring Boot, Spring MVC, Spring Security, Hibernate / JPA, JDBC, REST APIs, Microservices, JWT, OAuth, SSL/TLS, Multithreading

AI & LLMs: LLMs, Prompt Engineering, RAG, Vector Databases (ChromaDB), Embeddings, Tokenisation, Reranking, LangChain, LangGraph, AI Agents & Tool Calling, AWS Bedrock (Strands SDK), FastAPI

Data & Architecture: Oracle SQL, PL/SQL, MySQL, PostgreSQL, Lakehouse Architecture, Airflow, Databricks, ADLS, Trino SQL, Kafka, System Design (HLD / LLD), Design Patterns, DSA

Platform & DevOps: Docker, Kubernetes, Tomcat, JBoss, AWS, Linux, Shell Scripting, Git, Maven, JUnit, CI/CD

Production Support: Incident Triage, Root Cause Analysis, Log Analysis, Splunk, Dynatrace, Performance Tuning, UAT, Release Management, Agile / Scrum

PROFESSIONAL EXPERIENCE

Software Developer | Oracle Financial Services Software, Mumbai

Jun 2023 – Present

Branch Screens to APIs – FLEXCUBE Transaction & Maintenance APIs · HDFC Bank (current)

- Building the Java 17 / Spring Boot REST layer for HDFC Bank's move from branch screens to APIs, across Customer Maintenance, CASA, Term Deposits, Fund Transfers and Fixed Deposits on FLEXCUBE and OBP.
- Delivered **12 banking APIs**, including Account Opening, NEFT transactions, Customer Name Change, CBR Code Maintenance and **Sweep-In Maintenance** (provider-to-beneficiary account, multi-level sweep-in), plus SafeBox Hold Removal and TD Account Opening.
- Built Fixed Deposit APIs covering interest calculation, maturity processing and sweep; secured the layer with JWT, token caching, input validation and structured exception handling.
- Tuned Oracle SQL and PL/SQL procedures, packages and query plans for API response time and throughput on high-volume operations.

AI-Assisted Engineering · HDFC Bank programme

- Built a **strict-reference prompt framework** that generates API code and **test cases** only from approved sources (contracts, field mappings, existing behaviour) and stops with a named gap when evidence is missing; most of the team's development work now runs through it.
- Created a prompt that takes any API and produces its complete **error list**, applied across many APIs to speed up issue triage and resolution for the bank.

Lakehouse Report Migration Framework

2026

- Architecting a repeatable framework to migrate **800 reports** onto a Lakehouse: data in ADLS, transformations in Databricks notebooks, orchestration with Airflow DAGs, and report logic in Trino SQL.

FLEXCUBE Regulatory Report Generation · [HDFC Bank](#)

- Build FLEXCUBE report generation by category for RBI Central Bank Reporting (CBR); map schemas, report definitions and business rules, and reconcile output against source reports.

NetBanking Platform · [HDFC Bank](#)

- Built account management, fund transfer, balance inquiry and transaction history in Java, Spring Boot, REST, Oracle SQL and PL/SQL.
- Designed the **dual-queue OTP mechanism** (4–5 min → under 1 min); JWT-based CCIL integration with 24-hour token caching and auto-refresh; TCS transaction rate limiter; FDOD and KFS enhancements.
- Ran L2 production support on the same code: incident triage, RCA, log analysis in Splunk and Dynatrace, UAT and post-deployment validation under RBI compliance.

PROJECTS

Bharti Collection – Live E-commerce & POS Platform · [bharticollection.online](#)

Apr – Jun 2026

- Designed, built and deployed **solo** for a multi-brand clothing showroom (est. 2006): customer storefront, admin panel, and in-store billing/POS with returns and inventory.
- Spring Boot 3, Spring Security + JWT, JPA, PostgreSQL, React 18; Cloudinary image storage, Docker, Render; English/Punjabi toggle and local-business SEO.
- BCrypt-hashed, rate-limited OTP for sign-up and Cash-on-Delivery orders, consumed in the same transaction as the order to block replays and fake COD orders; UPI and Razorpay behind feature flags.
- Java + Selenium WhatsApp automation: personal thank-you messages with review links, SENT/FAILED logging and 30-day return reminders.

AI Engineering – LLMs, RAG & AI Agents · [Hands-on projects](#)

- Built a **RAG pipeline** (chunking, embeddings, ChromaDB vector store, retrieval, reranking) shipped as a chat-with-your-PDF app; LangChain apps with conversation memory; tokenisation and LLM comparison.
- Containerised ML, RAG (FastAPI + ChromaDB) and tool-calling **AI agent** services with Docker Compose; built agents with LangGraph and the AWS Strands SDK on Amazon Bedrock.

CERTIFICATIONS & ACHIEVEMENTS

- **Oracle Certified Professional, Java SE 17 Developer** (2024) · Oracle Certified Associate, Java SE 8 (2023) · Java Backend, GeeksforGeeks (2023) · SQL and Python, HackerRank (2022)
- **300+ DSA problems** solved on LeetCode and GeeksforGeeks · Languages: English, Hindi

EDUCATION

M.Sc. Computer Science · Woolf University

2026 – Present

B.E. Computer Engineering · Thakur College of Engineering & Technology, Mumbai University · **CGPA 9.78/10**

2019 – 2023
